

ANKITA NADARGE

AI / ML Engineer • Deep Learning • NLP & RAG Systems

Kolhapur, Maharashtra | +91 9529203459 | nadargeankita4@gmail.com | [LinkedIn](#) | [GitHub](#)

CAREER OBJECTIVE

Motivated Computer Science undergraduate with practical experience in machine learning, deep learning, NLP, and RAG-based AI systems with a proven track record of building and deploying end-to-end solutions across healthcare, energy, and recruitment domains. Seeking an AI/ML Engineer role where I can apply strong problem-solving skills and a passion for intelligent systems to create measurable real-world impact.

EDUCATION

QUALIFICATION	INSTITUTION	YEAR	SCORE
B.Tech – CST	School of Engineering & Technology (Department of Technology) Shivaji University, Kolhapur	2022-Present	CGPA: 7.90
HSC (Class XII)	Shivaji Mahavidyalaya, Udgir	2020–2022	60.00%
SSC (Class X)	S.S. Madhyamik Vidyalaya, Sukani	2017–2020	93.60%

TECHNICAL SKILLS

Languages	Python, Java, SQL
ML / DL	Scikit-learn, TensorFlow, Keras, LSTM, CNN, XGBoost, Random Forest
NLP / AI	LangChain, FAISS, RAG, HuggingFace, Transformers
Data	Pandas, NumPy, Matplotlib, Seaborn, Streamlit
Databases	MySQL, PostgreSQL
Tools	Git, GitHub, Jupyter Notebook, Google Colab, Power BI

INTERNSHIP

Labmentix Pvt. Ltd — Data Science with AI Intern

June 2024 – Sep 2024

- Built end-to-end ML pipelines in Python covering data ingestion, preprocessing, feature engineering, model training, and evaluation — iteratively improving model performance through experimentation.
- Deployed interactive Streamlit applications to visualize model outputs, enabling non-technical stakeholders to interpret AI-driven results with ease.
- Wrote clean, modular, production-quality code and collaborated with team to refine application functionality and usability.

PROJECTS

HydroGPT – AI-Based Hydropower Forecasting System

[GitHub](#)

- Trained and compared XGBoost, LSTM, and SARIMAX models on 10 years of hydrological time-series data with a 14-feature engineering pipeline, achieving $R^2 = 0.862$ with zero data leakage.
- Implemented a ReAct intelligent agent that autonomously orchestrates ML inference, flood risk analysis, and RAG-based knowledge retrieval.
- Integrated LLaMA 3 via Groq API with Retrieval-Augmented Generation (RAG) and deployed the system using FastAPI + Streamlit as a no-code forecasting platform.

AI Resume Screener – NLP-Based Job Matching System

[GitHub](#)

- Building an NLP-powered resume screening tool that parses resumes and matches them against job descriptions using TF-IDF vectorization and cosine similarity to rank candidate fit automatically.
- Designing a Streamlit interface to allow recruiters to upload resumes and JDs, receive ranked match scores, and identify skill gaps — replacing manual shortlisting with an intelligent, automated workflow.

Brain Tumor Classification using Deep Learning CNN

[GitHub](#)

- Built a CNN in Python (TensorFlow/Keras) to classify brain MRI scans into 4 categories: glioma, meningioma, pituitary, and no-tumor — achieving 95% classification accuracy.
- Implemented full pipeline: data preprocessing, augmentation, model training, and evaluation; deployed an interactive detection app for real-time clinical inference.

CERTIFICATIONS

- Python for Data Science, AI & Development – IBM
- Data Analysis & Visualization Simulation – Accenture
- Data Visualization Empowering Business – Tata Group
- Mastering DSA using C and C++ - Udemy
